EL-SW-NVR

Onboard/Extender Network Video Recorder

Comprehensive surveillance for installations of any size

The software-based Nice Onboard Network Video Recorder can support 4 channels, and up to 8 channels per Extender Controller. This full-featured system delivers an award-winning experience, convenience and power at an affordable price.

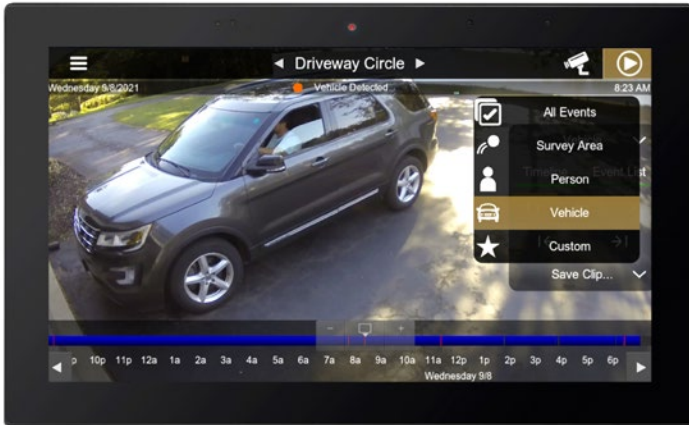

Setup is simple, requiring minimal hardware. Using Nice management cloud, install the license on an SC-100 or SC-300 System Controller, add external storage and the cameras are ready to roll. To take full advantage of the NVR system we recommend pairing it with Nice cameras, but it will operate with any ONVIF-compliant camera. With the Nice NVR Surveillance System, camera recording and playback

are controlled directly within the UI. Switch between standard or the new full screen view for live stream and recorded playback. Playback is viewable in a linear timeline with quick navigation tick marks in event-based mode where you can easily switch from one event to the next.

For small-scale (4 or fewer channels) or large-scale installations (up to 36 channels), there is no need to compromise on features. The Nice software NVR gives you the flexibility to grow your business.
